

Anyone can get kidney disease, but some people are more at risk. You may be more likely to get kidney disease if you:

- Have diabetes
- Have high blood pressure
- Have a family member with kidney disease
- Are African American, Hispanic, Asian, Pacific Islander or Native American
- Are over 60 years old
- Have heart disease

Use this chart to keep track of the medicines you take. Include any over-the-counter medicines and vitamins you take, too. Share this with your doctor at your next visit.
