

# 'Ground zero' for kidney disease: DC wards at high risk

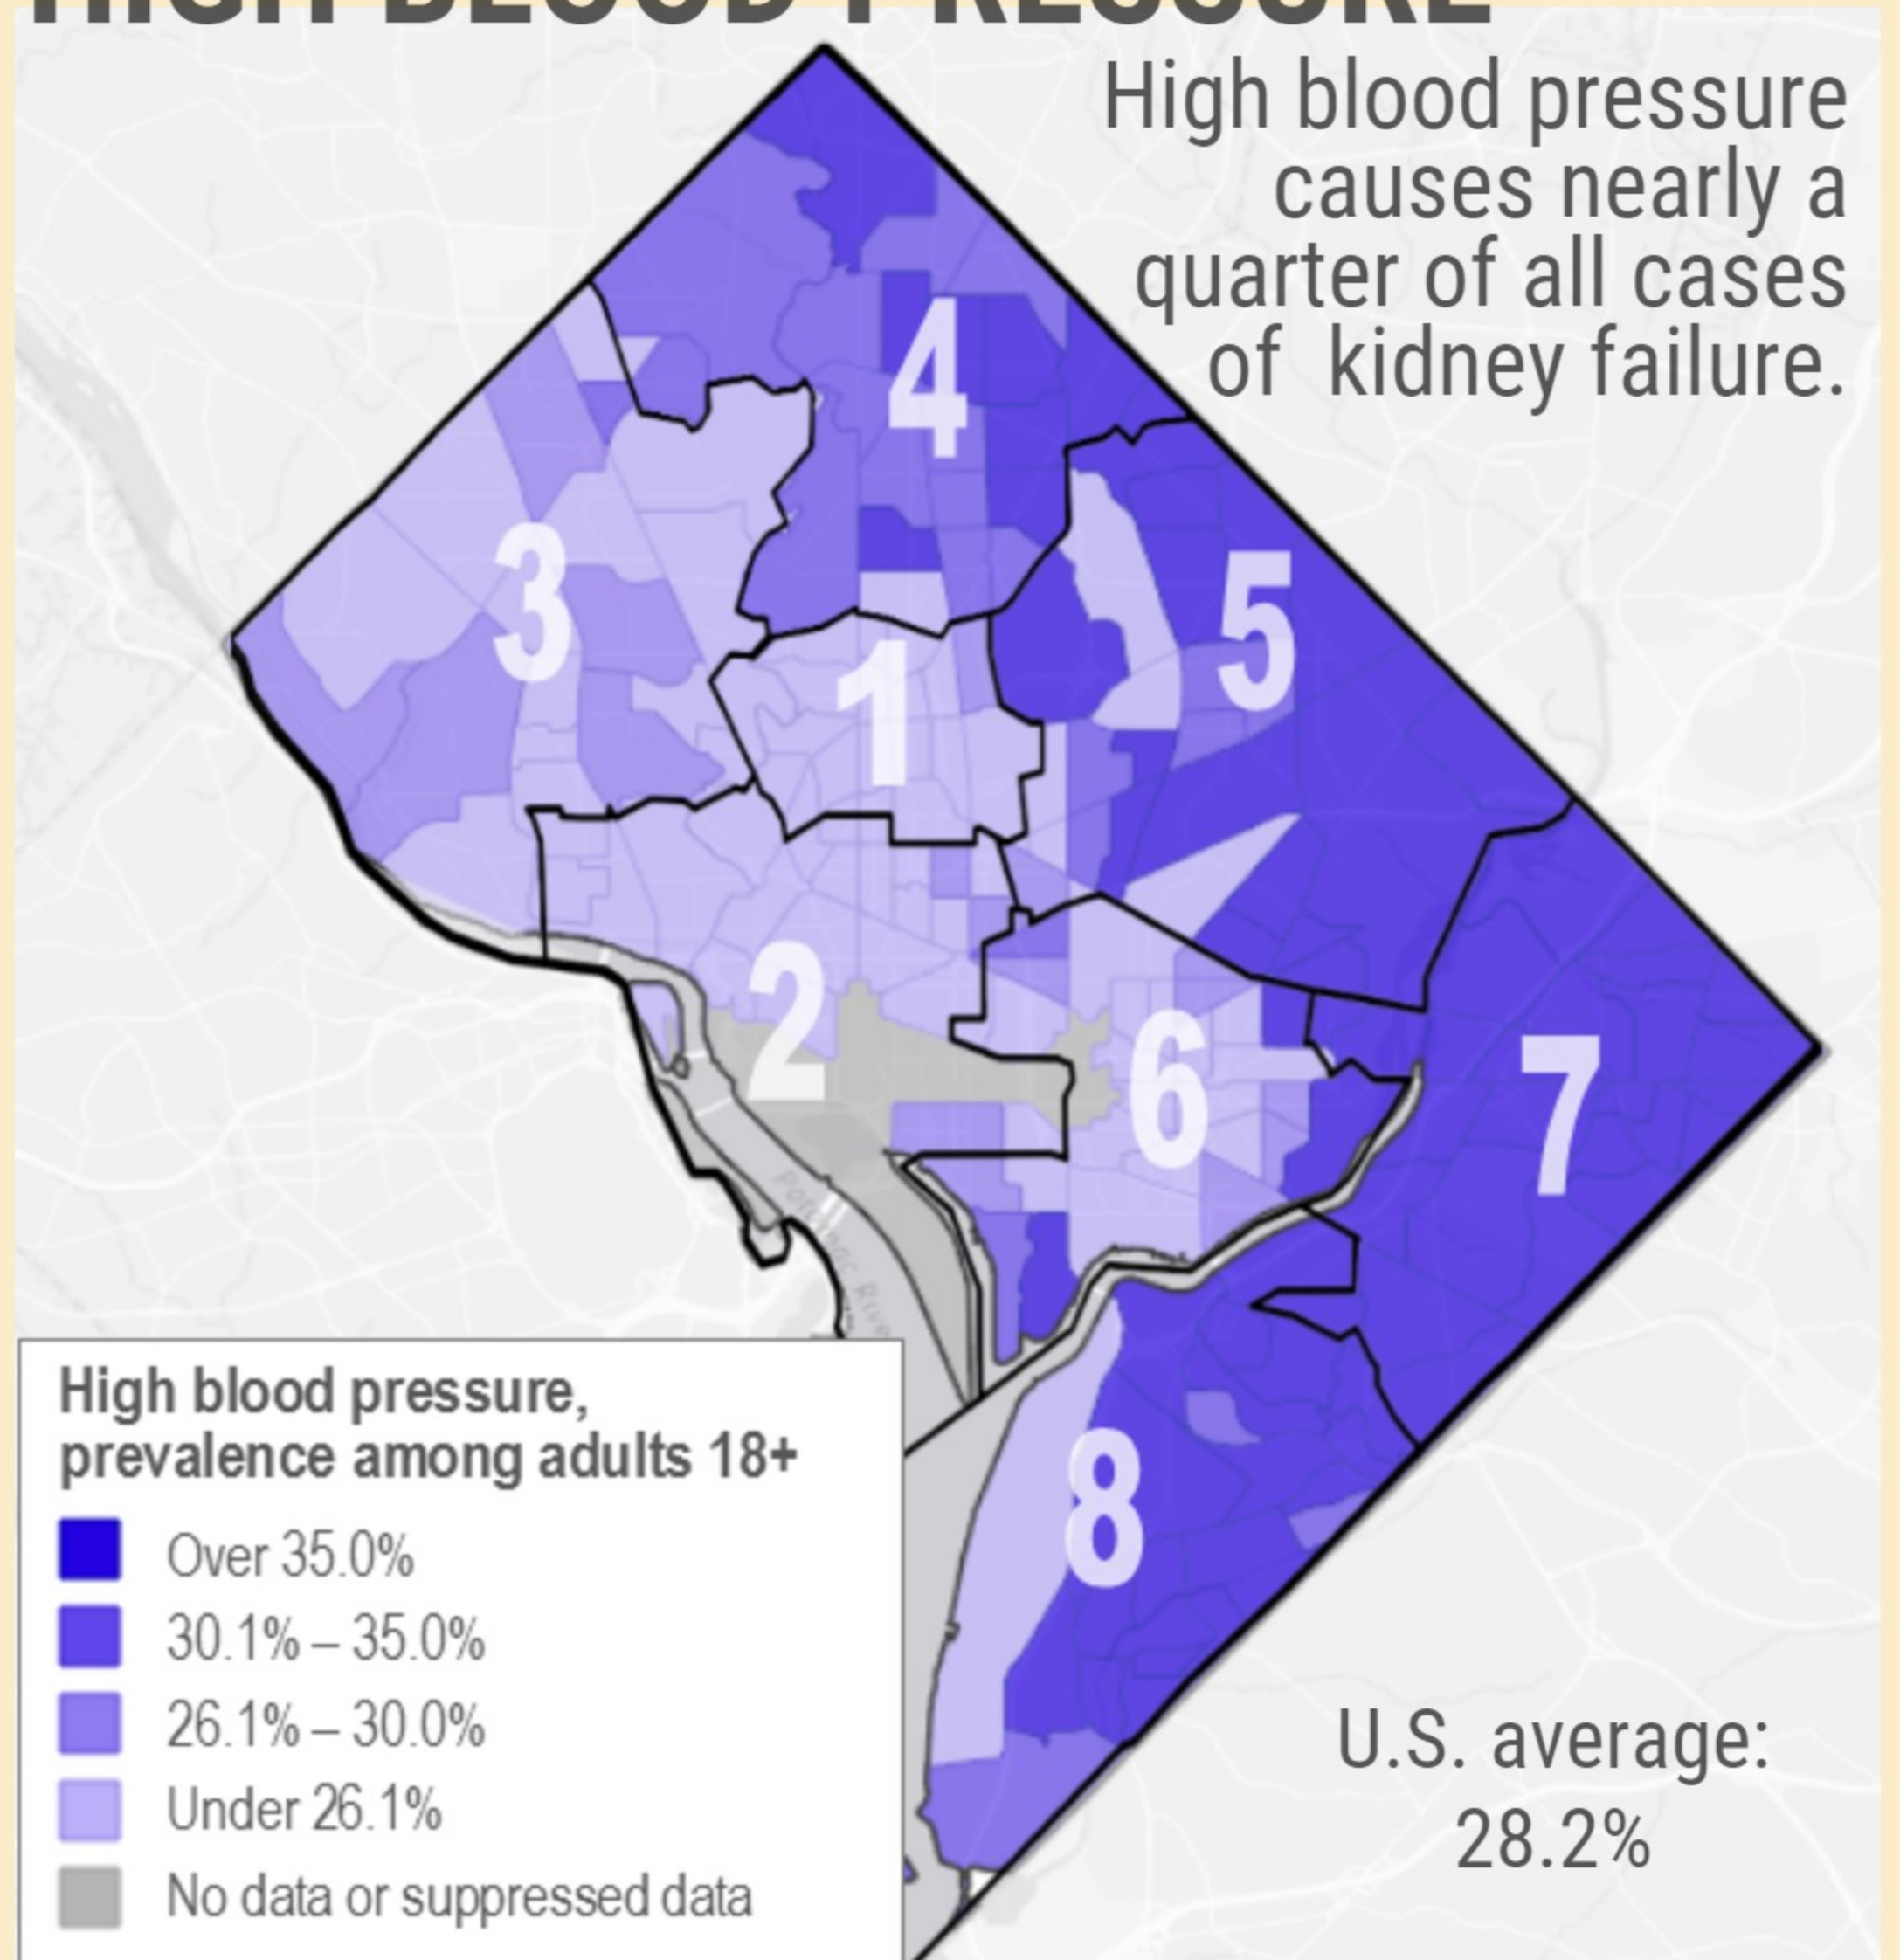

## DIABETES

Diabetes is the leading cause of kidney failure, causing nearly half of all cases.

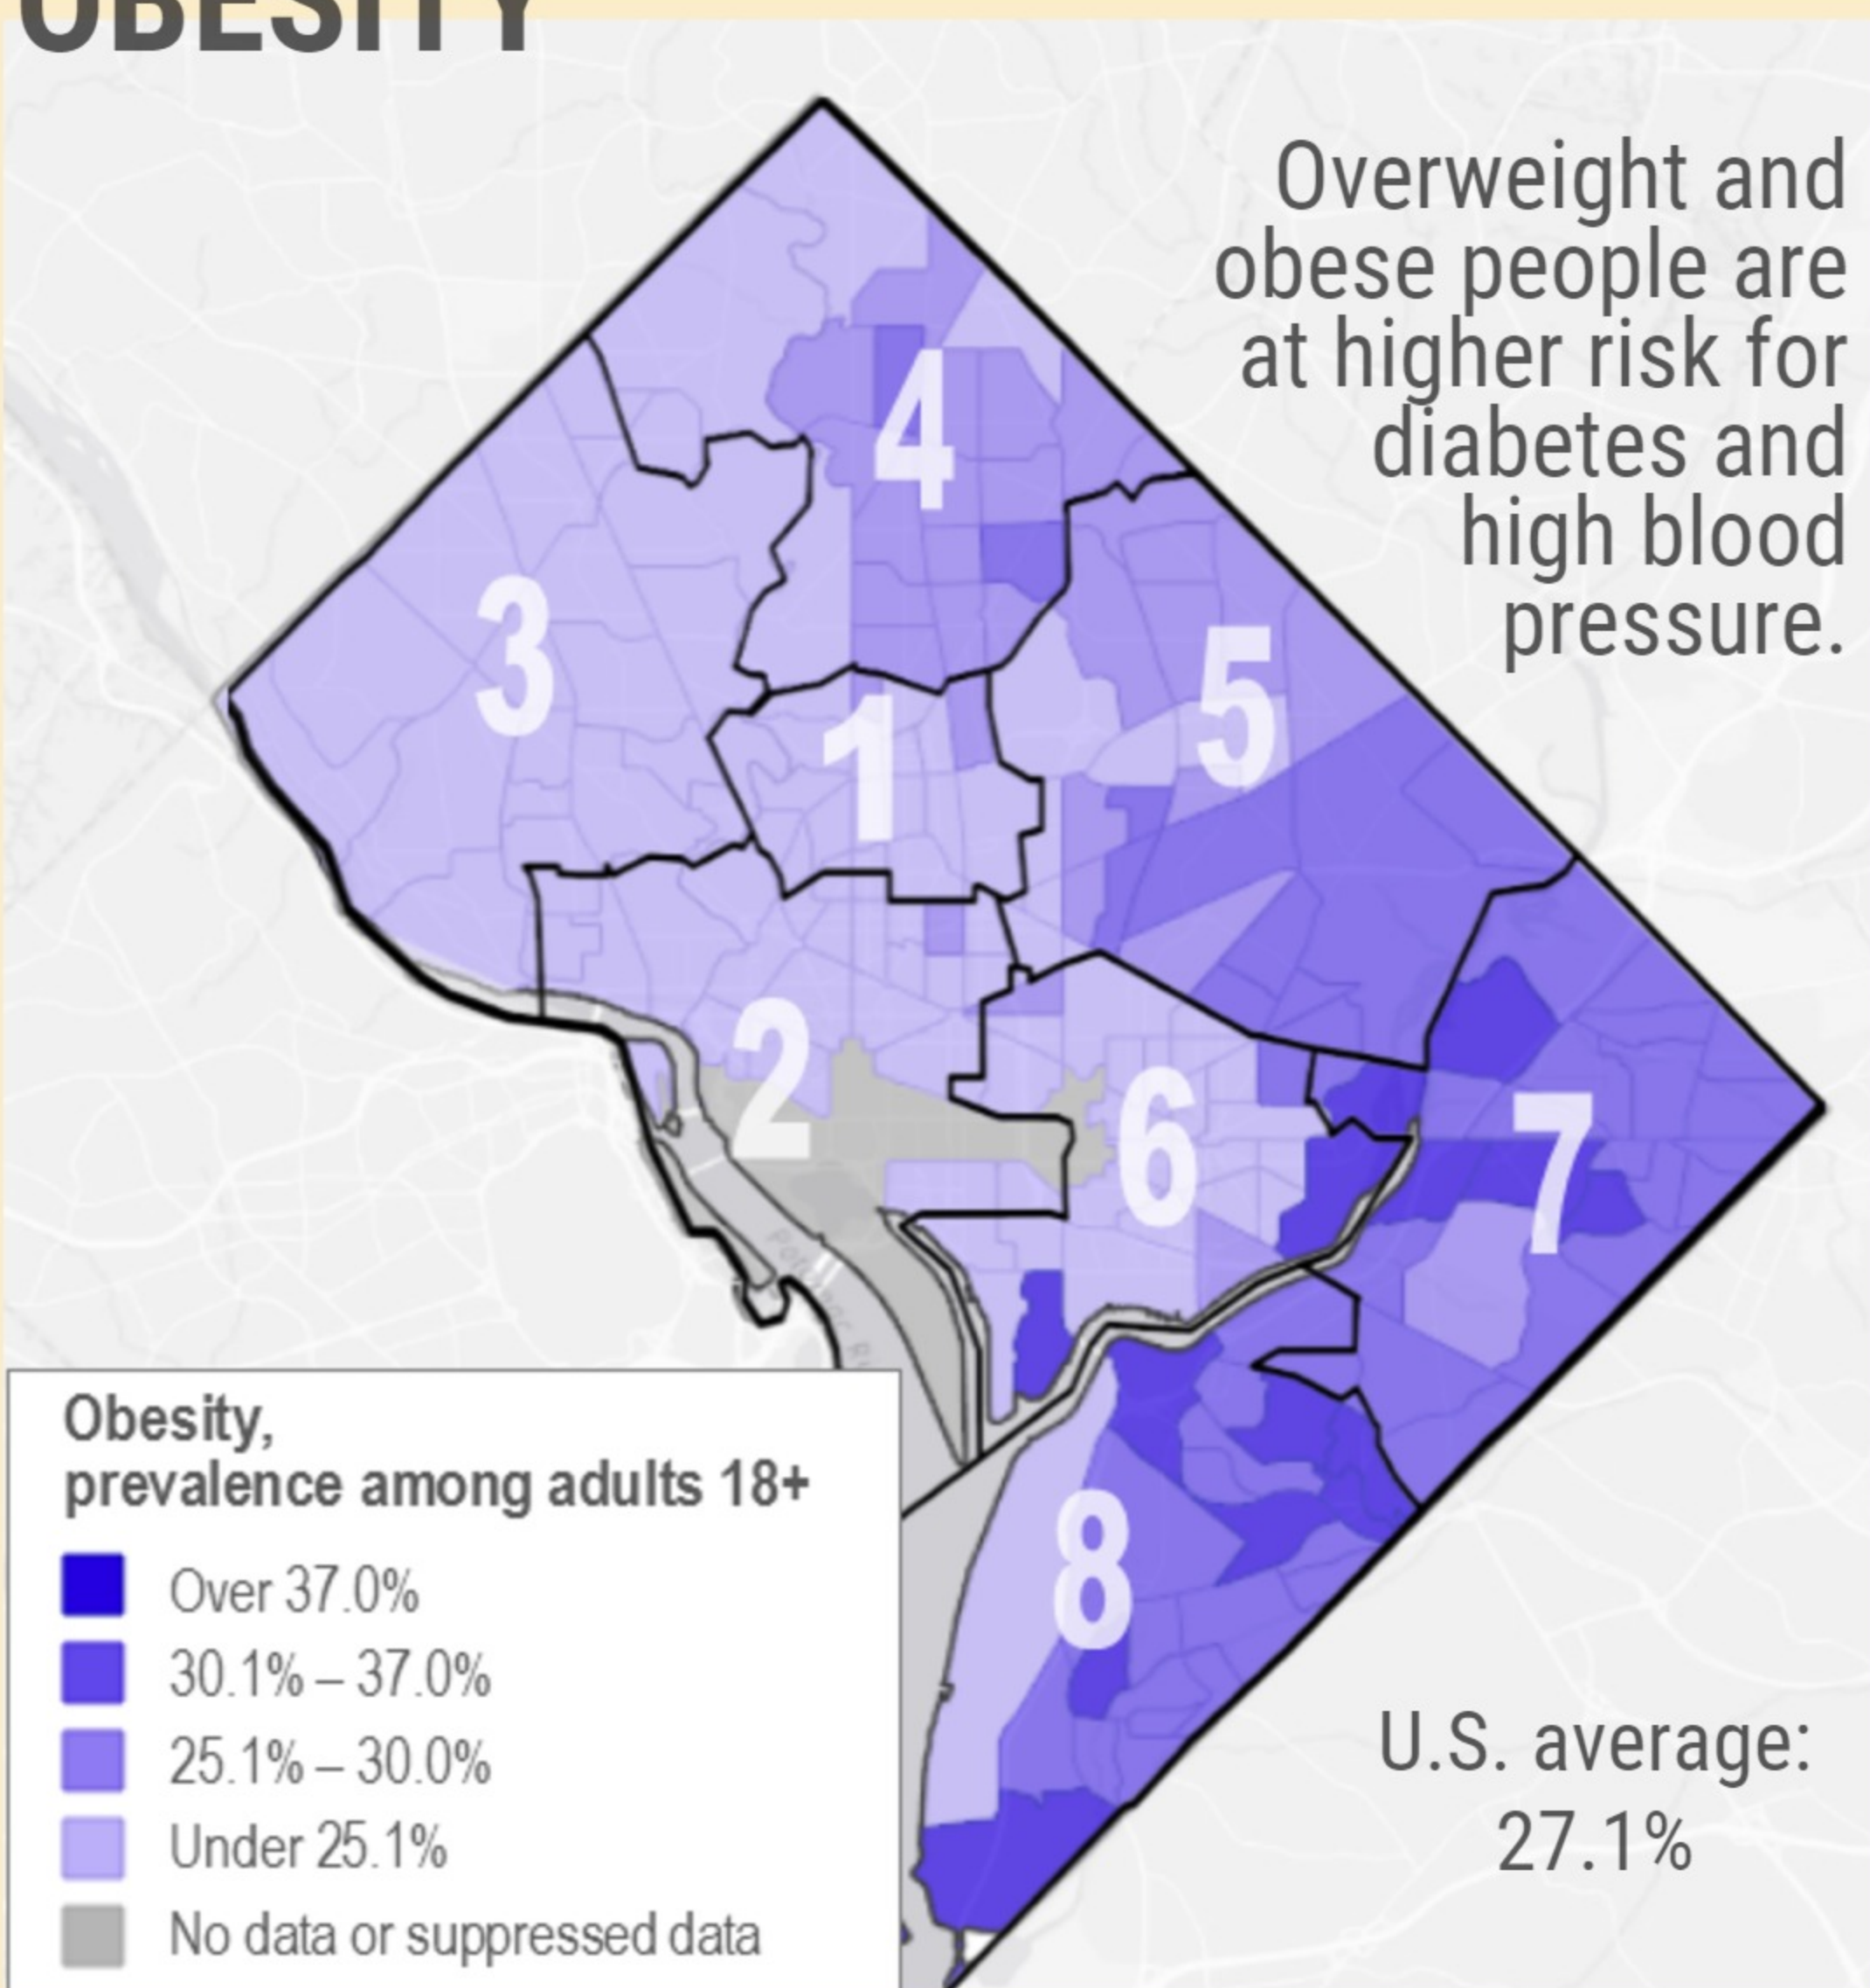

## HIGH BLOOD PRESSURE

High blood pressure causes nearly a quarter of all cases of kidney failure.

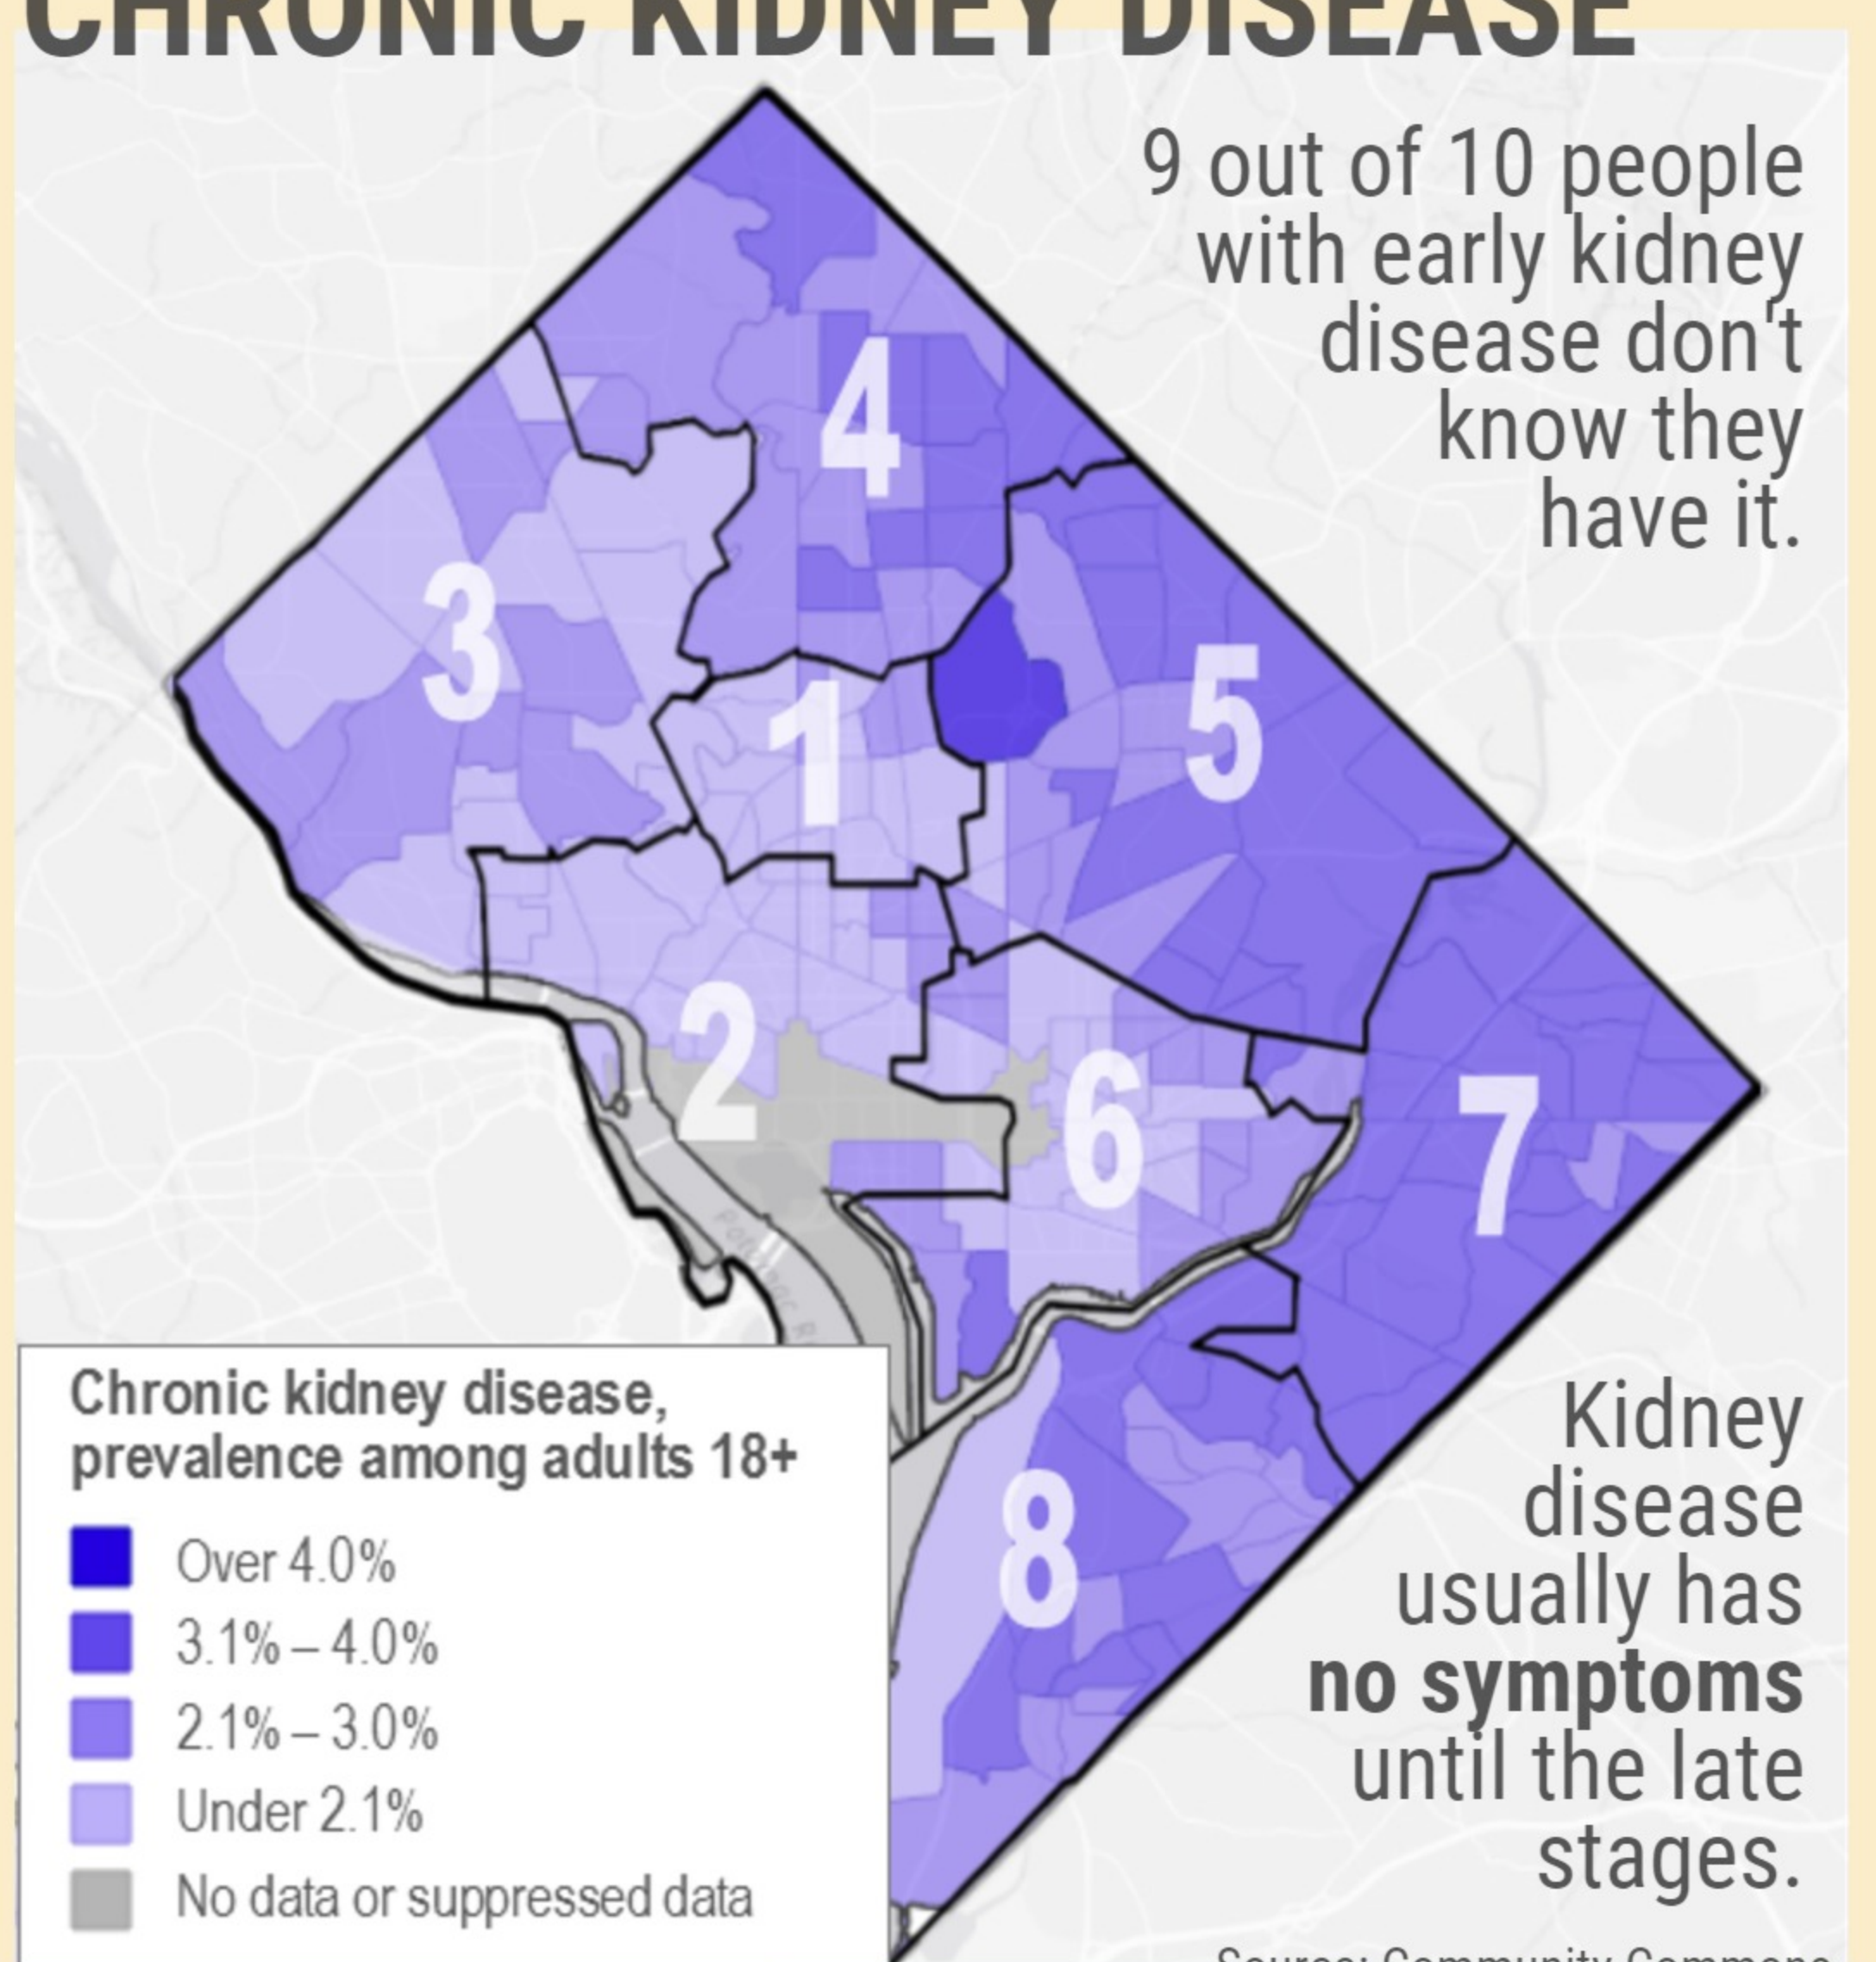

## OBESITY

Overweight and obese people are at higher risk for diabetes and high blood pressure.

## CHRONIC KIDNEY DISEASE

9 out of 10 people with early kidney disease don't know they have it.
