

Know the connection between

DIABETES and KIDNEY DISEASE

If you have diabetes, you are at risk for kidney disease.

34 MILLION
Americans have diabetes

and **1 IN 3** of them also has chronic kidney

That's nearly **12 MILLION** people who have both diabetes and kidney disease.¹

Diabetes is also the #1 cause of kidney failure.

Every 24 hours, **160 PEOPLE** with diabetes begin treatment for kidney failure.¹

Causes of kidney failure:

Diabetes

High blood pressure

All other causes combined²

What is diabetic kidney disease?

Diabetic kidney disease happens when high blood sugar damages your kidneys.

Once your kidneys have been damaged by diabetes, they cannot be cured.

If the damage is caught early, medicines and lifestyle changes can often keep it from getting worse.

You cannot feel diabetic kidney disease. The only way to know is to be tested.

Know how to prevent diabetic kidney disease or keep it from getting worse.

Control your blood sugar

Control your blood pressure

Control your cholesterol

Eat healthy

Quit smoking or using tobacco

Be active most days of the week
